

The Cedilleum Language Specification

Syntax, Typing, Reduction, and Elaboration

Christopher Jenkins

June 15, 2018

1 Syntax

id	identifiers for definitions
u	term variables
X	type variables
k	kind variables
$x ::= id \mid u \mid X \mid k$	any variable

Figure 1: Identifiers

$$\begin{aligned} uterms &::= u \\ &\quad \lambda u. uterm \\ &\quad uterm\ uterm \end{aligned}$$

Figure 2: Untyped terms

<i>mod</i>	<code>::= module <i>id</i> . <i>imprt</i>* <i>cmd</i>*</code>	module declarations
<i>imprt</i>	<code>::= import <i>id</i> .</code>	module imports
<i>cmd</i>	<code>::= <i>defTermOrType</i> <i>defDataType</i> <i>defKind</i></code>	definitions
<i>defTermOrType</i>	<code><i>id</i> <i>checkType</i>? = <i>term</i> .</code>	term definition
	<code><i>id</i> \triangleleft <i>kind</i> = <i>type</i> .</code>	type definition
<i>defDataType</i>	<code>::= data <i>id</i> <i>param</i>* : <i>kind</i> = <i>constr</i>* .</code>	datatype definitions
<i>defKind</i>	<code>::= <i>k</i> <i>params</i>* = <i>kind</i></code>	
<i>checkType</i>	<code>::= \triangleleft <i>type</i></code>	annotation for term definition
<i>param</i>	<code>::= (<i>x</i> : <i>typeOrKind</i>)</code>	
<i>typeOrKind</i>	<code>::= <i>type</i> <i>kind</i></code>	
<i>constr</i>	<code>::= <i>id</i> : <i>type</i></code>	

Figure 3: Modules and definitions

<i>kind</i>	<code>::= \star $\Pi x : \text{typeOrKind} . \text{kind}$ $\text{typeOrKind} \rightarrow \text{kind}$ <i>k term</i> <i>k</i> · <i>type</i></code>	explicit product kind arrow
<i>type</i>	<code>::= <i>X</i> $\Pi x : \text{typeOrKind} . \text{type}$ $\forall x : \text{typeOrKind} . \text{type}$ $\lambda x : \text{typeOrKind} . \text{type}$ $\text{type} \rightarrow \text{type}$ $\text{type} \Rightarrow \text{type}$ $\{ \text{uterm} \simeq \text{uterm} \}$</code>	explicit product implicit product type-level function normal arrow type arrow with erased domain untyped equality

Figure 4: Kinds and types

<i>term</i>	$::=$	x $\lambda x \text{ class}^? . \text{term}$ $\Lambda x \text{ class}^? . \text{term}$ $[\text{defTermOrType}] - \text{term}$ $\text{term } \text{arg}^*$ $\beta < \text{term} > \{ \text{term} \}$ $\varsigma \text{ term}$ $\rho \text{ term } \text{guide}^? - \text{term}$ $\delta \text{ type}^? - \text{term}$ $\phi \text{ term} - \text{term} \{ \text{term} \}$ $\mu \text{ motive}^? \text{ term} \{ \text{case}^* \}$	 normal abstraction erased abstraction let applications reflexivity of equality symmetry of equality rewrite type by equality ex falso quodlibet cast pattern match and fixpoint
<i>arg</i>	$::=$	term $- \text{term}$ $\cdot \text{term}$	normal application application to erased term application to type
<i>class</i>	$::=$	$: \text{typeOrKind}$	
<i>guide</i>	$::=$	$@ x. \text{type}$	guide for equality rewrite
<i>motive</i>	$::=$	$@ \text{type}$	motive for induction
<i>case</i>	$::=$	$ \text{id } \text{arg}^* . \text{term}$	

Figure 5: Annotated Terms
